SUMMARY

Experienced and results-driven Fullstack .NET Developer and Technical Project Leader with 6+ years of experience delivering scalable desktop, mobile, and web solutions. Proven track record leading cross-functional teams, optimizing SQL Server performance, and building robust APIs and ERP integrations. Adept at managing project backlogs, aligning technical solutions with business goals, and working in remote and dynamic environments.

EXPERIENCE

Project Leader | Azzule Systems | 2019 – Present

- Led technical analysis and coordinated cross-functional teams to deliver custom system improvements, reducing issue resolution time by 45% and ensuring alignment with client priorities.
- Designed and implemented .NET Core 6.0 APIs and console applications, automating data synchronization across multiple servers and improving data accuracy.
- Improved performance of SQL Server-based systems through query optimization and strategic indexing resulting in response times that are up to 40% to 60% faster.
- Supervised the enhancement of legacy Visual Basic systems, integrating HTML/JS components to modernize the UI and improve maintainability.
- Developed Windows Services in C# for automated label printing reducing manual design and printing time by 60%.

Fullstack Developer | BM Systems S.C. | 2017 – 2019

- Developed mobile inventory apps using Xamarin, integrating GPS routing and syncing with MS SQL Server.
- Built and maintained RESTful APIs with ASP.NET Web API for cross-platform communication.
- Supported and modernized ERP systems written in Visual Basic, integrating new features using C#.
- Created web dashboards using ASP.NET MVC with Google Maps integration for logistics visibility.

PERSONAL PROJECTS

- **Multiplatform Application with User Management and Banorte Payments Integration**
 - Development of a multiplatform application (web, iOS and Android) as PWA using Quasar and Vue.js 3, focused on user creation and payment management. Includes integration with

Banorte banking services and support for recurring payments, managed through a robust API developed in C# .NET Core 8. This solution ensures operational efficiency, transactional security, and a unified user experience across all devices.

- **Inventory Management and NOM-051 Product Labeling Application**
 - Android application developed in Java for product management, online inventory control, and automatic label generation in compliance with NOM-051 food labeling standards in Mexico. The solution is complemented by Windows services developed in .NET C#, responsible for automatic label processing and printing, improving speed, operational accuracy, and regulatory compliance.
- **Mobile Inventory and Camera-Assisted Translation System**
 - Android application developed in Java to manage inventory and facilitate order fulfillment, with the ability to translate labels from English to Spanish using the device's camera, optical character recognition (OCR), and translation API.

EDUCATION

Culiacán, Sinaloa
2011 – 2017

Computer Systems Engineer
Instituto Tecnológico de Culiacán

LANGUAGES

Spanish – Native | English – Advanced Level

SKILLS

- **Programming & Frameworks:** C#, .NET Core, ASP.NET, Visual Basic, Java, Xamarin, WinForms.
- **Web Technologies:** HTML, CSS, Typescript, JavaScript, Vue.js , RESTful APIs.
- **Mobile Development:** Android Studio, Xamarin.
- **Databases:** MS SQL Server, SQLite, T-SQL, Stored Procedures, Query Optimization.
- **Tools & Concepts:** Git, Agile/Scrum, Team Management, XML, JSON, Windows Services, Reporting.

CERTIFICATION

- **Scrum Foundation Professional Certification – SFPC™:** Issued by Certiprof
- **English Language B2:** Issued by Trinity College London
